You can special order sacs to suit your needs.

We make all of our Fat Sacs™ in house which gives us the ability to create custom sacs for our customers. The same CAD design software and process that are used to build our Pro X Series line of Fat Sac™ will be utilized to create your custom sacs. We can assure you that your designed sac will be extremely durable and of the highest quality. You also decide on which type of Quick Connect fittings you would like to use, how many there are and their exact location on the sac.

NOTE: Due to in increased in-house capabilities of staff, machines, an additional CNC material cutting table and new CAD design software capabilities we can now get custom sacs done in less time and at a better price. Please call for more information on CUSTOM SACS.
